

InfoValue *BizTV*[™]

Video Streaming Solution for Communications & Training

Enterprises often need to communicate with a large number of their employees in an engaging yet efficient manner. The use of traditional private TV broadcast systems, which deliver audio and video programs over analog cable and television monitors, is no longer effective. They are expensive to deploy and maintain, and offer only limited functionality and access to content.

InfoValue BizTV[™] solution is a leading edge, high-quality digital video streaming solution that offers many enhancements, including ease of deployment and maintenance, user friendliness, content security via conditional access control, instant access to large video-on-demand content libraries, network PVR and instant replay when viewing live broadcast.

InfoValue BizTV[™] solution delivers high quality video over an organization's existing IP infrastructure, eliminating the need for a separate broadcast network.

Analog audio and video signals are encoded into digital format in real-time and are multicast to any number of viewing clients simultaneously and efficiently. End users view the high quality video on TVs via digital set top boxes or on desktop PCs using software players with "TV-like" interfaces. An authentication server is used to provide administrator-defined conditional access to the multicast content.

▼ InfoValue BizTV[™] Advantages

- ★ MPEG-1/2/4, HDTV
- ★ Full feature Multicast & VOD
- ★ Network PVR
- ★ TV or PC clients
- ★ Over existing IP networks
- ★ Comprehensive management
- ★ Secure, scalable, reliable
